PLASTIBELL expands its Izernore facility to manufacture a pharmaceutical auto-injector

Following the signature of a strategic contract to manufacture pharmaceutical auto-injector components for a leading global medical technology company, Plastibell announces the creation of a new manufacturing area at its Izernore facility, in the “Plastics Valley” area, between Lyon and Geneva.

13 new injection molding machines ranging from 60 to 150 tons will fill this 630 m² (6,800 sqft) area. 5 injection molding machines have already been installed, and all remaining machines will be by 2022.

"This manufacturing extension is the consequence of a strategic partnership with a renowned worldwide player in the pharmaceutical industry. This partnership is both a recognition of our know-how and new step for Plastibell to become a global and preferred partner for the drug delivery device Industry. Thierry VAN TWEMBEKE, Plastibell CEO

Plastibell, a PSB Industries Group company since 2015, is a leading manufacturer of injection-molded components and systems for the Healthcare and Industry sectors, leveraging innovation to help its customers tackle their toughest challenges.

Plastibell operates globally, with 7 manufacturing plants in France, Poland, USA and Mexico, and a Global Innovation Center.

Plastibell offers the pharmaceutical and medical industry tailor-made solutions to develop and manufacture components, sub-assemblies or finished medical devices among which syringes, auto-injectors and aerosols, surgical kits and orthopedic implants, in-vitro diagnostic devices, hospital kits, safety and hygiene products. Service offer ranges from the concept phase to the actual product launch: design, prototyping, mold and automation development and validation, manufacturing, assembly, packaging, and registration support.
